My name is William Wolfe. I am writing in regards to the road treatment chemicals. I have seen first hand the damage it is doing to vehicles on the road. I have seen it on my own personal vehicles but also on commercial trucks. I am a heavy duty mechanic and have been working on these vehicles for over 21 years. In the past 3 or 4 years I have seen substantially more corrosion on susceptible parts. The frames, exhausts, attached steel parts are corroding , rotting and needing replacement and repair at a MUCH higher rate. I have heard that there is an additive that could be added to the treatment that substantially decreases this effect. I do not know how effective it is personally. Please, I urge you to take action on tis matter as it is going to cost families already hurting financially more in repairs to there vehicles.

Thank You,
William Wolfe
